DETAILED ACTION

1. Applicant's election without traverse of Group I (claims 2-4, 10 and 11) in the reply filed on 07/05/2005 is acknowledged.

- 2. Claims 5-8 and 12-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 07/05/2005.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 4 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 4 and 11, line 1, the use of the language "the memory" lacks nexus and/or antecedent basis with respective to claims 1 and 9, respectively.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Ahn ('742).

Ahn discloses a motor vehicle having an apparatus to observe objects in a visual blind spot of a vehicle comprising a side view mirror (1); at least one motor (5) mechanically coupled to the side view mirror, wherein a position of the side view mirror can be adjusted by the

Application/Control Number: 10/722,036

Art Unit: 2872

at least one motor; a controller (40) for controlling the at least one motor; and an object detector (30) that can detect objects within a visual blind spot of a vehicle, wherein the object detector is operable to provide a detection signal to the controller, wherein the controller provides a control signal to at least one motor to adjust a position of the side view mirror to provide a view of the blind spot of the vehicle to a driver of the vehicle. See column 1, lines 37-55 and figures 1-3 along with the associated description thereof.

7. Claims 1-4 and 9-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Jacobs ('380).

Jacobs discloses a motor vehicle having an apparatus to observe objects in a visual blind spot of a vehicle comprising a side view mirror (12); at least one motor (32) mechanically coupled to the side view mirror, wherein a position of the side view mirror can be adjusted by the at least one motor; a controller (microcontroller) for controlling the at least one motor; an object detector (36,37) that can detect objects within a visual blind spot of a vehicle, wherein the object detector is operable to provide a detection signal to the controller, wherein the controller provides a control signal to at least one motor to adjust a position of the side view mirror to provide a view of the blind spot of the vehicle to a driver of the vehicle (see Fig. 8) and memory (see Fig. 8) that can pre-store a first setting of the at least one motor that provides a position of the side view mirror giving a view of the blind spot and a second setting of the at least one motor that provides a normal viewing position of the side view mirror, wherein the detection signal from the object detector is used by the controller to send a control signal to the at least one motor to toggle the side view mirror between the normal and blind spot viewing positions depending on

Application/Control Number: 10/722,036

Art Unit: 2872

whether an object is detected in the blind spot of the vehicle (see column 4, line 56 to column 6,

line 7). Note figures 1-5, 8 and 9 along with the associated description thereof.

8. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Ricky D. Shafer whose telephone number is (571) 272-2320.

The fax phone number for the organization where this application or proceeding is assigned is

703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
